Why choose this course?
Interactive and visual design plays a pivotal role in the rapidly expanding fields of contemporary communication and new technologies. Careers in this area provide the opportunity to design for electronic and print media, Web and mobile technologies, games and physical computing, as well as new technologies as they continue to emerge.

Practical teaching
Our studio approach will support you to develop a strong conceptual understanding of design, which you will apply through exploration in a range of media and technologies.

You will develop creative and innovative approaches to designing visual and interactive media through your studio work. You will specialise your design interests and build a portfolio of individual practice as well as industry-based interdisciplinary team projects, which you can consolidate through industry placements.

Course structure
With an emphasis on creative and experimental approaches to design for new technologies, this course will take you beyond vocational design courses. You will gain an understanding of established design principles and technical skills. You can complement your design studies with options in film production, visual arts, sound design, game design, information technology or business to diversify your employment options.

Facilities / technology
You will learn in purpose-built multimedia studios in the award winning QUT Creative Industries Precinct.

Career outcomes
This course will prepare you for a range of careers in the creative industries such as advertising and marketing, Web design and electronic publishing, multimedia and interactive entertainment design, games design, and interactive exhibition design.

Graduates work in traditional design companies in areas such as graphic design, marketing, branding and print and television campaigns, Web design, interaction design, usability, knowledge management and information architecture. They also gain employment in new industries. Games companies employ graduates to work on content production, interaction design, visual design and real-time and virtual environments modelling.

You may pursue work in the visual effects and post-production areas of film and television. Multimedia design and interactive installation production is also a growth area in museums and other cultural institutions. In addition, visualisation companies increasingly provide opportunities across industries as diverse as mining, architectural and medical visualisation.

What our students say
In the final stages of her QUT degree, Oksana Zelenko joined a research team to help develop an online visual counseling tool for Kids Helpline. The result of the project is
an online space that enables young people to use their creativity to express their feelings and describe their interpersonal relationships through visual communication, as an alternative to traditional, verbal forms of counseling. Oksana says lecturers with extensive professional backgrounds provided concrete links between the course material and industry-level design practice. "But by far, the best part has been using my skills in a project that contributes to the wellbeing of young people in Australia. I'm continuing to develop my insights and expertise in this area through my PhD at QUT."

**AMB202 INTEGRATED MARKETING COMMUNICATION**

In past decades many organisations separated the different forms of marketing communication that convey their corporate and marketing messages. Integrated marketing communication requires a 'total' approach to planning marketing communication programs and coordinating communication strategies in support of overall brand and product/service marketing objectives.

This unit extends the areas of function and calculus introduced in MAB120 by introducing series representations for functions and more advanced methods of differentiation and integration for functions of one variable. A strong connection to real world problems is made by introducing the use of differential equations in modelling, and exploring appropriate methods of solution. Practical calculations of volumes and surface areas of solids of revolution extend your interpretations of the definite integral. Taylor and Fourier series are introduced as a means of approximating functions by sums of polynomials and periodic functions. Some more advanced methods for indefinite integrals, such as partial fraction decomposition, are also introduced.

**MGB210 MANAGING OPERATIONS**

This unit extends general management approaches to the production operations subsystems of service and manufacturing organisations. The unit focuses on the deployment of productive resources in order to maximise the added value of services and products. Issues of quality and efficiency are considered analytically in terms of broader strategies and constraints. It considers the opportunities that new technology brings to operational strategies in both manufacturing and service. Project management principles are considered in relation to resource deployment and continuous improvement.
